

The role of the financial system is to intermediate between lenders and borrowers, providing a menu of saving vehicles with differing risk and return characteristics. Financial intermediaries help the investors find the financing they need, taking into account the returns and risks on the project they wish to undertake. In carrying out their functions, financial intermediaries reduce transaction costs for savers and investors and help reduce problems of asymmetric information that are inherent in the relationships between investors and entrepreneurs. For a given level of saving, more efficient intermediation increases the productivity of investment. It seems obvious that the more efficient the financial system is, the stronger would be the economic growth.

The global economy for some time has enjoyed good economic growth and increasing depth in financial markets, accompanied by the significant financial innovation. This growth co-existed with a combination of favorable economic indicators, with relatively benign inflation levels, low risk premia, and an easy access to finance even in the midst of continuing global imbalances. Until recently, the risk associated with such development seemed to be contained; however gains from the benign macroeconomic environment of the last few vears have been dealt with a severe blow in the form of liquidity crunch triggered by the US subprime mortgage crisis. These events have brought to the forefront some global economic and financial vulnerabilities whose prolonged impact could pose certain risks given that the world is more integrated today than ever before.

Pakistan has made a significant progress in improving the health and soundness of the banking and financial sector over the last two decades. During this period of transformation, the financial sector of Pakistan has evolved into a more progressive and dynamic module of the economy, both in response to the financial sector reforms and to the growing financing needs of an expanding economy. In response to the growing demands of financial globalization, Pakistan's financial system is starting to integrate with international financial markets. Financial integration was particularly expedited in FY07 in which record high foreign portfolio investment was received in stock market as well as through the issuance of GDRs. Additionally, with the rising strength of the corporate sector and vigorous expansion plans, the central bank is in the process of initiating External Commercial Borrowing (ECB), which at the moment is approved on a transactional basis. This liberalization measure will provide an opportunity to the corporate sector to raise external loans for project finance, bond floatation, structured finance and Islamic products.

In Pakistan, the composition of financial sector gives credence that the overall dependence on the banking sector has increased in the last few years. Given the scope and requirements of the private sector, growth in the banking sector is essential. Encouragingly, the outreach of the banking sector continues to improve, with diversified pattern in ownership, both foreign and local, and with the network of commercial expanding banks. microfinance institutions and Islamic banks in all Alongside parts of the country. these developments, ongoing financial sector reforms are paving the way for a more diversified financial sector, equipped to facilitate the economic growth process. Financial sector assets have recorded a remarkable growth in recent years. Strong growth of mutual fund---being managed by professional and reputable asset management firms—is largely attributed to the improved performance of the domestic financial markets, and points to the gradual but steadfast process of diversification of the financial sector. These developments augur well for financial stability as well as meeting the goal of enhancing financial services penetration.

Monetary Policy Stance

The process of tightening of monetary policy began in FY05 from a broadly accommodative one to more aggressive. The moderate interest rates, together with broad-based private sector credit demand helped in raising industrial production. This has resulted in acceleration in monetary expansion. Therefore, heightened activity also fed a gradual rise in core inflation. The government's mid December 2004 decision to lift the freeze on domestic POL prices raised inflationary expectations, forcing a more aggressive tightening of monetary policy. It was in April 2005 that the SBP raised its discount rate by 150 basis points (bps) to 9 percent, and further to 9.5 percent in July'06 with the same objective of controlling inflation. Demand pressures were still high, as reflected by high growth in credit to private sector, rising imports resulting in the widening of the current account deficit and an expansionary fiscal policy envisaged in the Federal Budget 2006-07.In FY07, inflation target of 6.5 percent was surpassed by 1.3 percentage points, primarily because of demand pressures as reflected by widening fiscal and current account deficits and double-digit food inflation. During FY08, the SBP continued with tight monetary policy stance, thrice raising the discount rate and increased the Cash Reserve Requirement (CRR) and Statutory Liquidity Requirement (SLR). During H1-FY08, the SBP raised the policy rate by 50bps to 10 percent effective from August 1st, 2007. Furthermore, the SBP zero rated the CRR for all deposits of one year and above maturity to encourage greater resource mobilization of longer tenor and 7 percent CRR for other demand and time liabilities. In H2-FY08 the SBP further tightened Monetary Policy by raising discount rate by 50bps to 10.5 percent. Furthermore, the CRR was raised for deposits upto one year maturity by 100bps to 8 percent while leaving term deposits of over a year zero rated. The objective was to give incentives to commercial banks to mobilize long term deposits. In the light of continued inflationary buildup and increasing pressures in the foreign exchange market, the SBP announced a package of monetary measures on May 21, 2008 that includes;(i) an increase of 150 bps in discount rate to 12 percent; (ii) an increase of 100 bps in CRR and SLR to 9 percent and 19 percent, respectively for banking institutions (iii) introduction of a margin requirement for the opening of letter of credit for imports (excluding food and oil) of 35 percent, and (iv) establishment of a floor of 5 percent on the rate of return on profit and loss sharing and saving accounts.

Monetary and Credit Development

In order to improve the effectiveness of monetary policy and avoid ambiguities in sending out policy signals, the SBP has abolished the Annual Credit Plan (ACP). This was a long awaited measure, following the removal of credit ceilings which made the Credit Plan redundant. Since broad money (M2) was the only intermediate target in the monetary policy framework, SBP continued to prescribe targets of NFA, NDA, government borrowings and private sector credit .It is expected that the abolishment of ACP will help remove the uncertainties emanating from multiple targets of monetary aggregates.

A sharp jump in monetary aggregates during the last month of FY07 pushed the aggregate M2 growth for the year to 19.3 percent. This strikingly higher growth in M2 was caused entirely by a phenomenal rise in NFA in FY07.For 2007-08,the SBP had assumed that with real GDP growth target of 7.2 percent and inflation target of 6.5 percent, broad money(M2) supply growth should grow by 13.7 percent. The money supply growth during July- May¹ of the current fiscal year slowed to 9 percent compared to 14 percent during the corresponding period of FY07 (Table-5.1). The FY 08 growth in M2 is entirely attributable to a rise in net domestic assets (NDA) of the banking system due to high government borrowings for budgetary support, as the NFA registered a contraction during the period, mainly reflecting the weaknesses in country's external balance of payment. The monetary tightening has been successful in moderating the exceptional rise in private sector credit growth seen in recent years to levels consistent with its long term trends. However, the impact of this desirable moderation in private

¹ Pertains to 10 May for FY08 and 12 May for FY07

sector growth on M2 was more than offset by continued strong budgetary borrowings of the government from the banking system. The NDA of the banking system registered an expansion of Rs.656 billion during Jul-May FY08 compared with an expansion of Rs.395 billion during the corresponding period of last year.

Analysis of Monetary Indicators

Bank Credit to Government

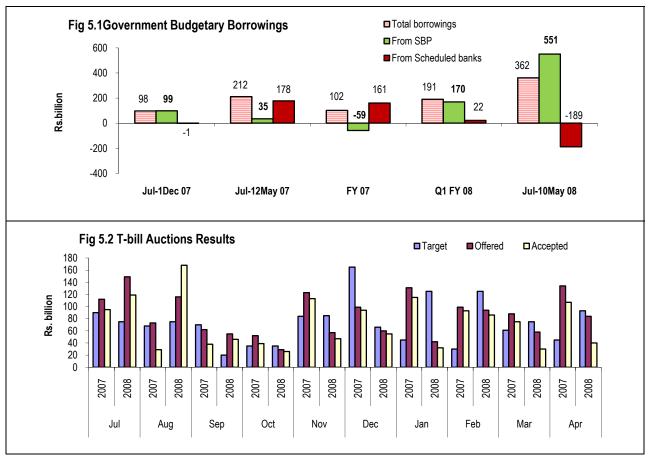

The net bank credit to the government for financing commodity operations and budgetary support amounted to Rs. 423 billion during July-May FY08 against Rs.185 billion during the same period last year. Credit to government for commodity operations expanded by Rs. 60 billion during July-May FY08 as compared to contraction of Rs.26 billion during the same period last year, while credit to government for budgetary support increased to Rs. 362 billion.

In the current fiscal year, domestic and external shocks of extra-ordinary proportions caused large slippages on the fiscal side. The financing plan of the fiscal deficit also affected by these shocks. The overall fiscal deficit of Rs.398 billion was to be financed by external sources(Rs.193 billion), and domestic sources (Rs 131 billion).The remaining Rs. 75 billion was to come from privatization proceeds. Within domestic sources, Rs 81 billion financing was to come from banking sources while the remaining Rs 50 billion was to come from nonbanking sources. The domestic and external shocks not only increased the size of the fiscal deficit but they also changed the composition of financing. The borrowing requirements increased from Rs. 324 billion (the net of privatization proceeds) to Rs. 683.4 billion (with no privatization proceeds)an increase of 111 percent. External resource inflows were adversely affected by these shocks and against the budgeted level of Rs.193 billion,

Pakistan Economic Survey 2007-08

only Rs.119.4 billion is likely to materialize. Pakistan could not complete the transaction of GDRs of the National bank of Pakistan and could not launch sovereign and exchangeable bonds. Furthermore; some of the lending from the multilateral banks could not be materialized. These developments had adversely impacted the external resource inflows which remained below the budgeted level. Thus, the brunt of adjustments on the financing side fell on domestic sources. Against the budgeted financing of Rs 131 billion from domestic sources, it increased to Rs 564 billion. Within domestic sources, the bulk (82.2 percent) of financing came from banks while the remaining Rs 100 billion or 17.8 percent came from non-bank sources. Most importantly, the borrowings from the State Bank of Pakistan reached at an alarming level which is posing serious complications for the conduct of monetary policy. On cumulative basis, as on May 10, 2008 government has borrowed Rs.551 billion from SBP during the current fiscal year, which has almost doubled the stock of MRTBs with SBP to Rs.945.9 billion. To put this in perspective, the July-May FY08 borrowings are twice the net borrowings seen during the preceding three years (Fig 5.1). The reliance on central bank borrowing is partly an outcome of scheduled banks' reduced interest in government papers. It may be pointed out that the government had borrowed substantially from the scheduled banks during O1-FY08. This trend however changed completely in subsequent quarters when scheduled banks showed little interest in the T-bill auctions. This probably reflects strong seasonal demand for private sector credit as well as attractive returns on such loans and tight liquidity conditions in the inter-bank market. In addition, the expectations regarding changes in discount rate in the monetary policy statement for H2-FY08 also limited the scheduled banks' participation in the auctions of the government securities. (Fig 5.2)

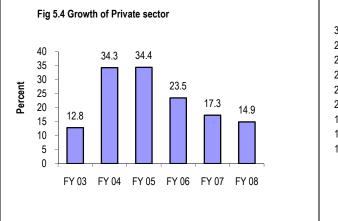

84

Net Domestic Assets

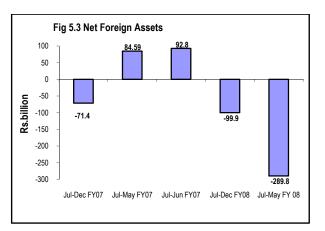

Due to phenomenal rise in government sector borrowings from the banking system, net domestic assets of the banking system registered a strong growth (21.32 percent) during July-May FY08 compared to the growth (14.67 percent) recorded during corresponding period of last year. The SBP has contributed the most to the overall NDA expansion mainly due to the strong growth in the government borrowings from the Central Bank. Credit to public sector enterprises which registered an expansion of Rs.44 billion in contrast to Rs.10 billion during the corresponding period last year also contributed to the current rise in NDA. This growth in the credit to PSEs is attributable to delays in settlement of oil price differential claims of one public sector oil marketing company (OMC), and the credit extension to the electricity distribution companies.

Net Foreign Assets (NFA)

NFA of the banking system registered a net contraction of Rs.289 billion during July-May FY08 compared to an expansion of Rs.84billion during the corresponding period last year. This contraction in NFA is attributable to delays in

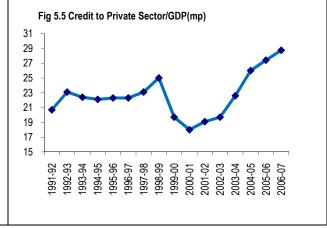

Net credit to private sector stood at Rs.369 billion during July-May FY08 compared with Rs. 263 billion in the same period last year. Private sector credit was growing at a slower pace till January 2008 compared to previous year, gathered momentum thereafter. The key factors contributing issuance of GDRs, sovereign bonds, receipts of lower-than-expected logistics support, decline in foreign investment, lower inflows from multilateral development banks, and SBP's decision to provide foreign exchange to support a part of oil payments even when the oil prices are at their historic high levels.

Credit to Private Sector

Credit to private sector grew by 14.9 percent during July-May FY08 as against 12.2 percent in the same period of last year. Credit to private sector as percent of GDP is continuously rising since 2001-02 (Fig-5.5).

to recent acceleration in private sector credit growth include: (i) rise in working capital requirements due to higher input costs; (ii)the need for bridge financing to settle price differential claims of the OMCs and IPPs; and (iii) the higher fixed investment in the month of March 2008.

A look on advances to private sector (Table 5.3) suggests that, while the increase in raw material prices did cause acceleration in credit demand in a few industries, the increase in interest rates had put significant downward pressures on credit demand especially in industries that are capable of generating cash flows internally, sufficient to meet working capital requirements. It must also be kept in mind that the credit by the banking sector is also being supplemented by other sources of financing. The private sector is using non-bank finances, thus shifting part of the credit demand away from the banking sources. In particular, besides banks, nonbank financial institutions are meeting the financing demand of the private sector through their investment in debt instruments (TFCs and Sukuk). It may be pertinent to note that most of the private sector TFC's and Sukuk's have been used to refinance bank credit. Availability of foreign investment and loans has also played an important role in softening the demand for bank credit particularly in telecommunication sector. It appears that demand for fixed investment loans has moderated in a number of industries. However, this does not necessarily suggests a slowdown in economic activity as (a) the moderation in fixed investment demand in cement, construction and textile is more of a reflection of the fact that these industries had already expanded their capacities in recent years; and (b) some of the industries are financing their expansion projects through other sources, such as foreign currency loans (e.g., telecom), foreign investments (telecom, chemical) and floatation of debt instruments (e.g., chemical, cement, real estate and ship yard) in the domestic market. Further, the demand for fixed investment is expected to grow substantially in the power and refinery sector.

The commencement of financing private sector power projects will provide a boost to private sector credit growth. It is also likely that companies which met their demand from external borrowings in earlier periods would revert to domestic markets given the expected widening of spread overseas. Although the SBP kept the liquidity conditions tight in inter-bank market throughout FY08, the impact on commercial bank's ability to lend was weaker by a number of factors such as increase in bank's paid up capital, more than required capital adequacy of banks, increase in non-performing loans, particularly in consumer financing, SME, corporate and internal cash generation through increased profitability, the continued process of mergers and acquisitions, upgradation of the risk management systems in a few banks and a slight deterioration in credit quality have prevented a few banks from aggressive lending.

Sectoral Analysis:

Manufacturing, power, and commerce made major contributions in the growth of net advances. In contrast, contribution from services, construction, personal and others was significantly lower during Jul-Mar FY08 compared to the corresponding period of FY07.

<u>Agriculture Sector:</u> The gross disbursement to agri-sector grew by 24.8 percent to Rs 138.6 billion) during Jul-Mar FY08 compared with 21.9 percent in the same period of last year (Table-5.4).Production loans rose by 28.5 percent to Rs.125.4 billion from Rs.97.6 billion last year; while the development loans declined to Rs.13.1 billion from Rs.13.6 billion during the same period. Commercial banks gross disbursement during Jul-Mar FY07grew to Rs.95.1 billion. An encouraging factor regarding disbursement of agricultural credit was the increasing role of private domestic banks vis-à-vis traditional lender, ZTBL. The share of private domestic banks in total disbursement increased from 14.5 percent (Rs 16 billion) during Jul-Mar FY07 to 21.6 percent (Rs.29.9 billion) during Jul-Mar FY08.On the other hand, share of ZTBL declined from 36.8 percent(Rs.40.8 billion) during Jul-Mar FY07 to 28.5 percent (Rs.39.5 billion) during Jul-Mar FY08.Among the major commercial banks, National Bank of Pakistan continued its dominance, followed by Habib Bank Limited, MCB Bank, Allied Bank of Pakistan Limited, and United Bank Limited.

otal (1+11)	97.6	13.6	111	125.4		S	

Power Sector: The demand for advances was significantly higher in power sector during Jul-Mar FY08. Indeed, the rise in working capital loans incorporated the impact of delays in payment from WAPDA to IPPs, whereas growth in fixed investment loans reflects the impact of capacity expansion in private sector power projects.

Manufacturing: Credit to manufacturing sector rose to Rs.193 billion during Jul-Mar FY08 compared to Rs.119 billion in Jul-Mar FY07.This higher growth was mainly driven by higher advances to the textile sector (Rs.94.2 billion in the FY08as compared to Rs.21.6 billion in the same period last year); excluding the textile industry, the growth in advances to manufacturing sector has decelerated.

Construction: Advances to construction sector rose to Rs.15 billion during Jul-Mar FY08 Rs.10.3 billion in the corresponding period last year. The issuance of privately placed Sukuks for financing new projects probably explains lower demand for fixed investment loans from this sector. Besides rising housing demand, the increase in domestic raw material prices for construction mainly explains the higher demand for working capital requirement in this sector during Jul-Mar FY08.

Consumer Loans: Advances to consumer loans slowed and reached to only Rs.16.6 billion during Jul-Mar FY08 from Rs.35.2 billion in the preceding year (Table 5.5). The decline in consumer loans is evident in all categories (except mortgage finance). In particular, deceleration in the growth of auto finance was attributed to (1) lower demand for automobiles due to increase in prices of locally produced cars, and (2)risk aversions of banks following recovery issues(e.g., one of the banks has even suspended auto finance scheme).

Monetary Assets

The Components of monetary assets (M2) include: Currency in Circulation, Demand Deposit, Time Deposit, Other Deposits (Excluding IMF A/C, counterpart) and Resident's Foreign Currency Deposits (RFCDs). The developments in these components during the July-May FY08 of the current fiscal year are presented below (Table-5.6)

Note: Compilation of M1 based on weekly data has been discontinued. Now M1 is being compiled on the basis of monthly returns and is given in Table 2.1 which would be published in the monthly Statistical Bulletin of SBP from April 2008 in Table 2.1.

i. Excluding IMF A/c No 1 & 2 SAF Loans A/c, deposits money banks, counterpart funds, deposits of foreign central bans, foreign governments.

ii. Excluding inter-bank deposits of federal and provincial governments and foreign constituents and international organizations etc.

iii. Income Velocity of money is defined by the State Bank as GDP at current factor cost/quarterly average of Monetary Assets (M2)

Currency in Circulation

As shown in the Table 6.6, currency in circulation during July-May FY 08 increased to Rs.186 billion from Rs.133 billion during the same period of last year. The currency in circulation constituted 23.2 percent of the money supply (M2) as against 22.5 percent in the same period last year.

Source:SBP

Deposits

During July-May FY08, demand and time deposits has declined to Rs.165 billion as compared to

Rs.340 billion in the same period of last year. On the other hand, RFCDs has registered an increase and reached to Rs. 27 billion as compared to Rs.4 billion in the same period last year.

The M2/GDP ratio, which is an indicator of financial development continued to exhibit a rising trend since 1990-00 from 36.9 percent to 46.6 percent in 2006-07.In March 2008, however, M2/GDP ratio was 42 percent as compared to 43.4 percent in the corresponding period of last year (see Table 5.7).

Monetary Management

The Money market in Pakistan has developed substantially since the process of liberalization of the financial system began in the early 1990s.A vibrant inter-bank money market not only helps to transmit monetary policy signals but also provides stability to financial institutions through meeting short-term liquidity requirement with relative ease and at competitive rates. The focus of SBP's monetary management in FY08 was to improve the transmission of policy rates to the retail rates by draining the excess liquidity from the money market and keeping the overnight rates close to the discount rate. The tight monetary stance adopted since April 2005, did help in containing inflationary pressures in the economy. Nevertheless, high monetary growth towards the end of FY07 and substantial increase in government borrowing from SBP during current fiscal year along with shortage in food supply, started to dilute the impact of a tight monetary policy stance. To contain the rising inflationary pressures in the economy, SBP therefore continued with a tight monetary stance during the current fiscal year, as the risk of inflation was outweighing the risk of economic growth. The SBP raised its policy rate by 250 basis points in the monetary policy statements and revised CRR for demand and time liabilities and SLR in the upward direction. Complement to the tight monetary policy stance, the SBP continued recourse to Open Market Operation (OMOs) more frequently to manage liquidity at the desired levels in the inter-bank market. (The SBP moped up Rs.766 billion during July-Mar FY07 against the injection of Rs.118 billion as compared to Rs.700billion against the injection of Rs.72 billion in corresponding period of last year.)

The impact of tight monetary stance and liquidity management began to translate into a rise in other interest rates, with varied magnitude, at different stages of the economy. For instance, 6 months T-bills cutoff witnessed an increase of 97 basis points to 9.9 percent during Jul-Apr FY08.Similarly, 6 months and 12-months KIBOR also increased by 77 basis points and 63 basis points to 10.38 percent and 10.71 percent respectively at end April 2007 in the same way, 6-months reportates depicted an increase of 133 basis points to 9.98 percent during Jul-Apr FY08.

The SBP accepted Rs.495 billion from the primary market of T-Bills during the first nine months of FY08 as compared to Rs.696 billion in FY07 (Table-5.9). Market offered a total amount of Rs. 682 billion in first nine months of FY 08 as compared to Rs.843 billion in the same period of last year. In the first nine months of FY07 heavy investment was in 12 months T-bills which constituted almost 80 percent of the total accepted amount due to the fact that 12-months T-bills provided the highest interest earnings with zero risk in the short run (Fig-5.7).

In order to develop the bond market, and to reduce the cost of funds for financing the fiscal deficit in the long run, Government has started PIBs auctions since December 2000. In FY07, the supply of long term government paper started to pick up pace as the government started to hold primary auctions of PIBs in a more regular and predictable manner. Regarding long-term interest rates, an important development in FY07 was the extension of yield curve to 30 years. Interest rates of long term government securities also registered increase due upward revision of discount rate, and yield curve moved in the upward direction in the range of 81 to 110 basis points approximately. The SBP mopped up Rs. Rs.68 billion from the primary market of PIBs during the first nine months of FY08 as compared to Rs.37 billion in the same period of FY07 (Table-5.10). Market offered a total amount of Rs.133 billion in first nine months of FY08 as compared to Rs.100 billion in the same period of last year. In the first nine months of FY07 heavy investment was in 10 years PIBs which constituted almost 33 percent of the total accepted amount. (Fig 5.9).

At the second stage of monetary transmission, changes in SBP policy rate translated into an increase in financial institutions' lending and deposit rates (Table 5.11). The spread between the lending and deposit rates has also decreased from 7 percent in June 2006 to 6.7 percent in March 2007.However, W.A. lending rate has declined by 10 basis points during December 2007 to March 2008.In the Interim Monetary Policy Measures announced by the State Bank, all banks are required to pay a minimum interest rate of 5 percent on saving deposit products; aimed at encouraging people to save more.

Pakistan's Financial Sector Performance

Financial stability in Pakistan has benefited from structural transformation of the banking sector and wide-ranging policy initiatives of the State Bank. The country's prudential regulatory regime has been crafted to promote and preserve financial sector stability. The regulatory framework encourages (i) financial sector growth, diversification and innovation, (ii) healthy competition and risk taking to ensure a sustainable and aggressive income stream, (iii) opportunities for enhancing the franchise value of banks, (iv)prudent behavior and effective risk management and loan provisioning requirement are stringent enough to discourage infection of loan portfolio, and (v) safeguarding social obligations and consumer interests. Financial sector stability has been further fostered by strengthening of bank's system wide capital base. Financial stability will further benefit from State Bank efforts to operationalize a Real-time Gross Settlement System (RTGS) named as PRISM (Pakistan Real Time Inter-bank settlement Mechanism) in June 2008 that will allow shift from traditional paper-based, end-of-the-day settlement system to electronic payment system for large value, low volume inter-bank funds' transfers and settlements. Financial sector is now predominantly owned by the private sector which presents some new challenges. The State Bank of Pakistan is now working to develop an adequate policy framework for consumer protection, development of *Financial Safety Nets* such as Deposit Insurance ,and a well-laid out 'Lender of last resort' procedure. The framework would strike a balance between enhancing consumer protection and minimizing moral hazard concerns.

Commercial Banks

The impressive performance of Pakistan's banking sector has attracted considerable FDI into the industry in recent years. Commercial banks in Pakistan operate on a sound capital base with a commendable record of financial performance, particularly in the last 3 years.

In Jul-Dec 2007-08, total number of branches of banks was 8233 as compared to 7890 in 2006-07; there has been an increase of 343 branches in the first six months of FY07.Assets of all banks showed a net expansion of Rs.203.1 billion in the first six months of FY08 and stood at Rs.5155 billion as compared to Rs.4351 billion in the same period of last year. An acceleration in private sector credit contributed to increase in scheduled banks' assets. The total deposits of all banks registered an increase of Rs.168 billion in the first 92 six months of FY08 and reached at the level of Rs.3852 billion as compared to Rs. 3255 billion recorded in the same period of last year.Net investment of the banks showed an increase of Rs.95 billion in Jul-Dec FY08 mainly contributed by the private banks amounting to Rs.934 billion as compared to Rs.601 billion for the six months of last year. (Table 5.13)

The banking sector of Pakistan in recent years has undergone a visible change as about 80 percent of the banking assets are now controlled by the private sector. While this has yielded significant benefits in the form of increased competition, product innovation, technological up-gradation and diversification of business activities, a host of new risks have also surfaced. This has necessitated the adoption of international best practices by the banks/DFIs in classification and provisioning against their loans and advances portfolio to banking system. further strengthen the soundness and stability of

The NPLs are the most important indicator of determining the asset quality of any bank because the gross NPLs to gross advances and net NPLs to net advances are considered as key indicators of quality of lending. As on 30th September 2007, the gross NPLs of the banking system recorded at Rs.163 billion and gross NPLs to gross advances were at 6.5%. For the financial results of 2008, commercial banks were needed to provide Rs 24 billion excess provisioning as per SBP's directive regarding Forced Sales Value (FSV) of collateral. On the basis of the provision provided by the commercial banks against non-performing loans, the net NPLs to net advances ratio rose to 2.4% .In December 2007, the State Bank of Pakistan withdrew the benefit of FSV against all non performing loans (NPLs) for calculating provisioning requirement which directly hampered the profits of entire banking sector. Hence, the banks have to go for 100 percent provisioning against the NPLs. However, liquid assets are being subtracted to calculate provisioning against NPLs. Therefore, the banks will show fewer profits due to higher provisioning against their NPLs. Earlier, there was an option for the banks to shelter the actual required provisioning by showing collateral process higher than the actual value. Due to FSV, major impact would result in high recovery of NPLs. The SBP further elaborated that the classified loans and advances that have been guaranteed by the government would not require provisioning. According to an analysis; private commercial banks will face biggest impact for SBP provisioning policy while foreign banks would face the least impact. The SBP's timely decision to eliminate the benefit of FSV of collateral will help the banks to improve their loan quality and recovery rate going forward. The measure taken by

SBP to streamline the financial sector is seen as a positive step and will help the banks to strengthen their balance sheets.

Islamic banks

Initially conceived in response to a faith-based logic of conforming to the principles of *Shariah* in all spheres of life, the astounding growth of the Islamic Financial Industry also drew on the wealth accumulation in oil-rich countries in the ensuing years, and reflects its potential of financially viable and lucrative segment of the global financial system. Islamic Financial Institution (IFIs) have been successful in tapping the previously excluded market on faith-based considerations, as well as the already included segment on preference-based considerations, by giving them the opportunity to choose between the two parallel modes of financing and investment.

The Islamic Financial industry in Pakistan has grown substantially since the launch of SBP's focused strategy to promote a parallel Islamic Banking system in 2001. This performance is commendable for such a short period, given that other countries have achieved similar levels of growth in their respective Islamic banking industries after several years of existence. Besides banks. IFIs in Pakistan include Islamic Mutual Shariah-compliant Funds, housing finance services, takaful companies and modarabas. Sukuk issuances have also attracted considerable attention in recent years.

Table 5.14 Islamic Banks										
	FY03	FY04	FY05	FY06	FY07	FY08 (March)				
Assets of the Islamic banks	12,915	44,143	71,493	119,294	205,212	200,415				
Deposits of the Islamic Banks	8,397	30,185	49,932	83,740	146,945	141,933				
Share in Banks Assets	0.50%	1.40%	2.10%	2.90%	4.20%	4.10%				
Share in Bank Deposits	0.40%	1.25	1.90%	2.80%	4.10%	3.90%				

The overall deposits of IBIs at the end of February 2008 stood at Rs.141,933 million and reflected a share of 3.9 percent in banks assets as compared to 0.4 percent only in FY03, the downward trend in FY 08 as compared to last year was inline with the decreasing trend in deposits of all banks that began in January 2008. Total assets of the Islamic banks reached at Rs.200,415 million from Rs.12,915 million in FY03 and contributed 4.1 percent in banking assets till end of February 2008 (Table 5.14). The industry has over the years managed to

offer a wide array of products encompassing almost the entire range of modes of Islamic financing that are able to cater to the needs of majority of the sectors of the economy. The segments covered by the industry include Corporate / Commercial, Agriculture, Consumer, Commodity financing, SME Sector, Treasury and Financial institutions and manufacturing and Services concerns through various Shariah complaint modes.

Table 5.14 (a) Financing Produ	ets by Islamic b	anks (%age	e)

Qarz/Qarz-e-hasna						
Others	1.3	9.8	3	3	7.1	6.7

The highest share in financing products of Islamic banks is contributed by Murabaha, Ijara, and Diminishing Musharaka in FY08 (March).As the industry develops, SBP continues to provides an enabling environment for Islamic Banks. Work is underway on the development of Bait-ul-Maal certificates to provide a sovereign instrument for liquidity management, and risk management guidelines have been issued.

Microfinance Institutions

The operations of MFIs, including Microfinance Banks (MFBs), Non-Government Organizations (NGOs), Rural Support programs (RSPs) and Commercial Financial Institutions (CFIs) have witnessed significant improvements, which are reflected in almost all aspects of the microfinance industry. Number of new MFBs branches has grown, total assets have increased, products are being gradually diversified, outreach is being extended, branch network is being expanded and growth has been achieved in the total number of borrowers and advances.

With a focus on expanding microfinance reach to 3 million borrowers by 2010, a strategy for *Expanding Microfinance Outreach* (EMO) has been developed by the SBP which was approved by the Government in February 2007.The EMO strategy stresses on the fact that commercialization of the sector is key to financial and social sustainability.

Table 5.15 Disbursement of Loans by Microfinance Banks (Rs.million)									
T	2006.07	July-1	March						
Institution	2006-07	2006-07	2007-08

Microfinance									
Banks (Others)	2500968	1875405	2298604						
Total	6111868	4230446	4888662						

During Jul-Mar 2008, Khushali Bank, which leads the microfinance sector in Pakistan disbursed loans amounting Rs.2.6 billion as compared to Rs.2.3 billion in the same period last year. While the share of all other microfinance banks in loan disbursement increased to Rs. 2.3 billion in Jul-Mar FY08 from Rs. 1.8 billion in the Jul-Mar FY07.

Small and Medium Enterprises

The importance of the SME sector cannot be overemphasized in the overall industrial development of a country. SMEs constitute nearly 90% of all the enterprises in Pakistan; they employ 80% of the non-agriculture labor force; and their share in the annual GDP is nearly 40%.During FY08, credit to SME sector has decreased to Rs.18 billion from Rs.30 billion during FY07. Mining, Electricity, Commerce and other private business sector registered in crease while Manufacturing, Services, Communication, Construction sectors recorded a substantial decrease.

Non-Bank Financial institutions (NBFIs)

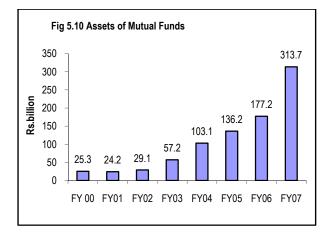

The major objective of the introduction of the concept of NBFCs i.e. Non-Banking Finance Companies in 2002, was to enable the existing (mainly) single-product institutions serving specific market niches, to offer a whole variety and range of financial products though a one window operation akin to universal banking, subject to compliance with the prescribed progressively-tiered regulatory requirements. It was expected that consolidation of different financial services under one umbrella would lead to the emergence of stronger, well-capitalized entities, which will provide a fillip for the future development of the non-bank financial sector.

The key market players in the non-bank financial sector of Pakistan are non-banking Finance Companies (NBFCs), mutual funds, modarabas and Development Finance Institutions (DFIs). The non –bank financial sector has historically played

Pakistan Economic Survey 2007-08

an important role in the mobilization and channeling of savings in the financial system. The NBFIs have, in recent years benefited from an environment of low interest rates coupled with high economic growth but have been unable to create an impact as well-functioning, specialized financial intermediaries.

The success story among NBFIs is that of mutual funds. The mutual fund sector is rapidly growing in Pakistan and accounted for the largest chunk in total assets of non-bank financial sector. Between FY00 to FY 07, net assets of mutual funds have grown by more than 12 times to reach Rs.313 billion from Rs.25 billion only in FY 00.

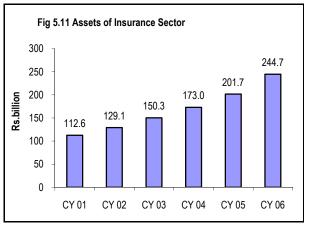

Insurance Sector

The role of the insurance sector is significant in promoting the stability, not just of the financial sector, but also of the overall macroeconomic environment as it provides protection against uncertainty to economic agents by an equitable transfer of risk. Life insurance companies in particular, due to the long –term nature of their premiums, are also among the large institutional investors for capital and money market instruments.

The insurance sector in Pakistan consisting of life, non-life and the sole reinsurance company (PRCL), has seen considerable improvements since 2001 on account of rise in the demand for insurance by corporate, households and public sector entities. However, with two-thirds of the population living in the rural areas and low per capita income, the insurance sector faces various hurdles in its growth.

The growth in insurance sector is reflected in the increase in premiums and profitability, as well as assets for both life and non-life insurance. Private sector companies have launched innovative products in the recent past, such as livestock and crop insurance, which will help promote the quality of bank's lending to agriculture sector.

The low insurance penetration highlights the need for concerted efforts to bring about reforms that would increase the competitiveness and outreach of Pakistan's insurance industry. As a step in this direction. Insurance Ordinance 2000 has laid out targets that will help the expansion of the industry in the coming years, for instance, the recent increase in capital requirements will result in the emergence of stronger players in the industry. Appointment of the Insurance Ombudsman is another measure which would also go a long way in boosting the confidence of the public by setting complaints expeditiously. Other insurance sector reforms envision the privatization of State Life Insurance Corporation (SLIC), the largest state owned operator in the life insurance sector. Moreover, Postal Life Insurance is planned to be brought under the ambit of the Insurance Ordinance 2000.Foreign investment rules in the insurance sector have also been amended in order to attract FDI in the sector.

P : Provisional

1 Excluding IMF A/c Nos 1 & 2 SAF Loans A/c deposits money banks, counterpart funds, deposits of foreign central banks and foreign governments.

2 Excluding inter banks deposits and deposits of federal and provincial governments, foreign constituents and international organization etc.

3 Income velocity of money is taken as GDP at current factor cost / quarterly average of monetary assets (A2)

Explanatory Notes:

a Data series on monetary aggregates other than M1 are based on weekly returns reported by scheduled banks to SBP.

b Data series on M1 aggregates (as Sr. # 8) is issued on monthly returns reported by scheduled banks to SBP and published is Statistical Bulletin from Aril 2008.

c The stock data of M2 has been revised since June 2002 due to treatment of privatization commission deposits with NBP as government deposits. These deposits were previously included private sector deposits which have now being included in government deposits.

d Totals may not tally due to separte rounding off

Explanatory Note:

a: It may be noted that data series of M1 from 2000-01 is not comparable as compilation of M1 based on weekly data has been discontinued by the SBP. Now M1 is being compiled on the basis of monthly returns and will be reported in the monthly statistical Bulletin of the SBP beginning from April 2008 in its table 2.1

b: The stock data of M2 has been revised since June 2002 due to treatment of privatization commission deposits with NBP as

government deposits. These deposits were previously uncluded in private sector deposits which have now being included in

government deposits.
